

Comparing content versions

In EPiServer CMS you can activate the compare view to see what has changed between versions for a specific content.

Toggle the **Compare** button on the toolbar to activate the compare view, to see the changes side by side.

Click the button again to turn off the compare view. Also, the compare view will be turned off if you toggle view settings and pre-view, for example, a smart phone.

If you are working with the content and activating the compare view, the draft will be shown in the left pane and the currently published version in the right. To compare different versions, then click the left or right drop-down button in the compare toolbar to select a version to display in the respective pane.

It is also possible to resize the panes, and to publish the draft.
